

Turing

Ogbonna

Nigeria

I'm a passionate, highly motivated, goal-oriented developer, and enjoy working as part of a team. I'm proficient in HTML, CSS, JavaScript, React.js, Redux, Node.js, Python, Flask, Bootstrap, C++ (basic knowledge). I'm a fast learner and a problem solver. When I encounter coding challenges, I usually do not like to think that it can't be done, so I put in a lot of energy and time to ensure that it's done. My career goal is to get a senior software developer job at a large company / institution in 2yrs. To achieve this I would improve my skills, learn new tech stacks, improve my data structure and algorithms skills. As an end goal, I would go into Artificial Intelligence and Machine Learning, I want to build A.I systems that would impact positively in Medicine and Healthcare Sciences e.g Robot assisted Surgeries.

✔ Technical Skills

You will be matched for these following skills:

JavaScript	3 years
Node.js	3 years
React	2 years
HTML	3 years
CSS	3 years
Redux	2 years

Additional skills:

Python | 2 years

C++ | 2 years

Bootstrap | 3 years

Selenium | 1 year

NGINX | 3 years

📁 Work History

🔵 Fullstack Web Developer

June 2021 - Present

1 yrs

MEDSOPH

Medsoph Health Solution

https://github.com/kennedyC2/Sigma_Solutions

- Developed a healthcare system / platform for online medical services, comprising of laboratories, pharmacies, doctor's forum / hub, using React while managing State through Redux.

- Built the MEDSOPH API following RESTFUL standards to allow effective data processing, storage and access.

- Tech stacks implemented for frontend includes HTML, CSS, JavaScript, React.js, Redux and a node.js based backend.

// =====
Git hub repo for React & Redux based medsoph app: https://github.com/kennedyC2/Sigma_Solutions.

// =====
Git hub repo for node.js based medsoph api: https://github.com/kennedyC2/Sigma_API.

- Helped maintain code quality, organization and automation for other applications, owned by the parent company.

Project is still under development, although beta version for the laboratory which is a web app that stores test information, takes inventory of laboratory test kits and reagents, analyses and outputs data to dashboard, gives real time notification of items out of stock, sends test results to clients, has been pushed out and is currently undergoing client testing. PWA version of the laboratory app was also rolled out to enhance user experience. The doctor's forum and pharmaceutical aspects of the MEDSOPH health system is still in development (React / Redux).

RedRock Inventory Management System

<https://github.com/kennedyC2/RedRock-IMS>

- Worked as a team leader and fullstack developer, at RedRock Technologies Ltd, Owerri, Imo State. Developed and maintained an Inventory Management System

- Developed accessible, responsive, and functional user interfaces to allow visitors on any device to have the same perfect user experience.

- Developed and maintained a node.js based Restful API with PayStack Payment integration and synchronization of data collected by the Inventory Management System across network of customers.

- Diagnosed and troubleshooted different websites of the company's important clients, by deploying updated knowledge of modern technologies and techniques in the industry.

- Helped maintain code quality, organization and automation for other applications, owned by the company.

- Proactively worked with my team to ensure efficient and timely delivery of significant projects.

- Tech stack used includes HTML, CSS, Vanilla JavaScript, Node.js

The Project was a success, the company has experienced increased revenue, better customer relationship, reduced wastage, losses, and has been able identify slow selling products, which has help them strategically make plans to better their services to customers accross the country.

🔵 Fullstack Web Developer

February 2020 - August 2021

1 yrs 6 mos

Lusty Orgasms

Website

<https://github.com/kennedyC2/Lustyorgasms>

- Freelance development and maintenance of lustyorgasms.com for almost 2yrs, as a fullstack web developer.

- Created a Mobile Friendly User Experience with CSS flexbox, that allowed cross platform accessibility to the website on any device.

- Built a Node.js based Restful API that served data and videos from Redtube, through the Redtube API as a primary source of data and videos for the site.

- Implemented Search Engine Optimization [SEO], Google Search Analytics, Google Search Console, which was used to boost online presence, increase traffic to the site, increase page views, maximize user experience and also track CPA of the website.

- Tech stacks used include HTML, CSS, Vanilla JavaScript, Node.js.

Project was a success and served my client wonderfully, especially the increased online presence, page views, and increased Cost Per Action (CPA), Cost Per View (CPV), Cost Per Click (CPC), which lead to an increase in revenue generated by the website.
